

Kumar Organic Products Limited

Triclosan 5000

Triclosan is a potent wide spectrum and antibacterial and antifungal agent. It is a chlorinated aromatic compound which has functional groups representative of both ethers and phenols. Phenols often show antibacterial Properties.

Triclosan is found in soaps, deodorants, Toothpaste, shaving creams, mouth washes and cleansing supplies and is included in an increasing number of consumer products.

Triclosan is very effective in reducing and controlling bacterial contamination on the hands and on treated products. At use concentration, Triclosan acts as a biocide, with multiple cytoplasmic and membrane targets. At lower concentrations, Triclosan appears bacteriostatic and is seen to target bacteria mainly by inhibiting fatty acid synthesis.

End use / Property
